Introduction

Xero Integration extension for Magento 2 is a great tool that allows you to synchronize accounting data automatically from Magento 2 store to Xero Website.

Features

- Sync customer data from Magento 2 store to Xero both manually and automatically.
- Sync product data from Magento 2 store to Xero both manually and automatically.
- Sync order data from Magento 2 store to Xero both manually and automatically.
- Sync invoice data from Magento 2 store to Xero both manually and automatically.
- Sync Credit Memos from Magento 2 store to Xero both manually and automatically.
- Allow admin to view sync history log to see what is synchronized between two apps.
- Allow admin to manage the sync queue to see what will be synchronized next.
- Allow admin to request a report on the Backend of Magento 2.
- Support multiple-website
- Add to queue mass action in customer listing, product listing, order/invoice listing, and credit memo listing
- Sync to Xero mass action in customer listing, product listing, order/invoice listing, and credit memo listing

System Requirements

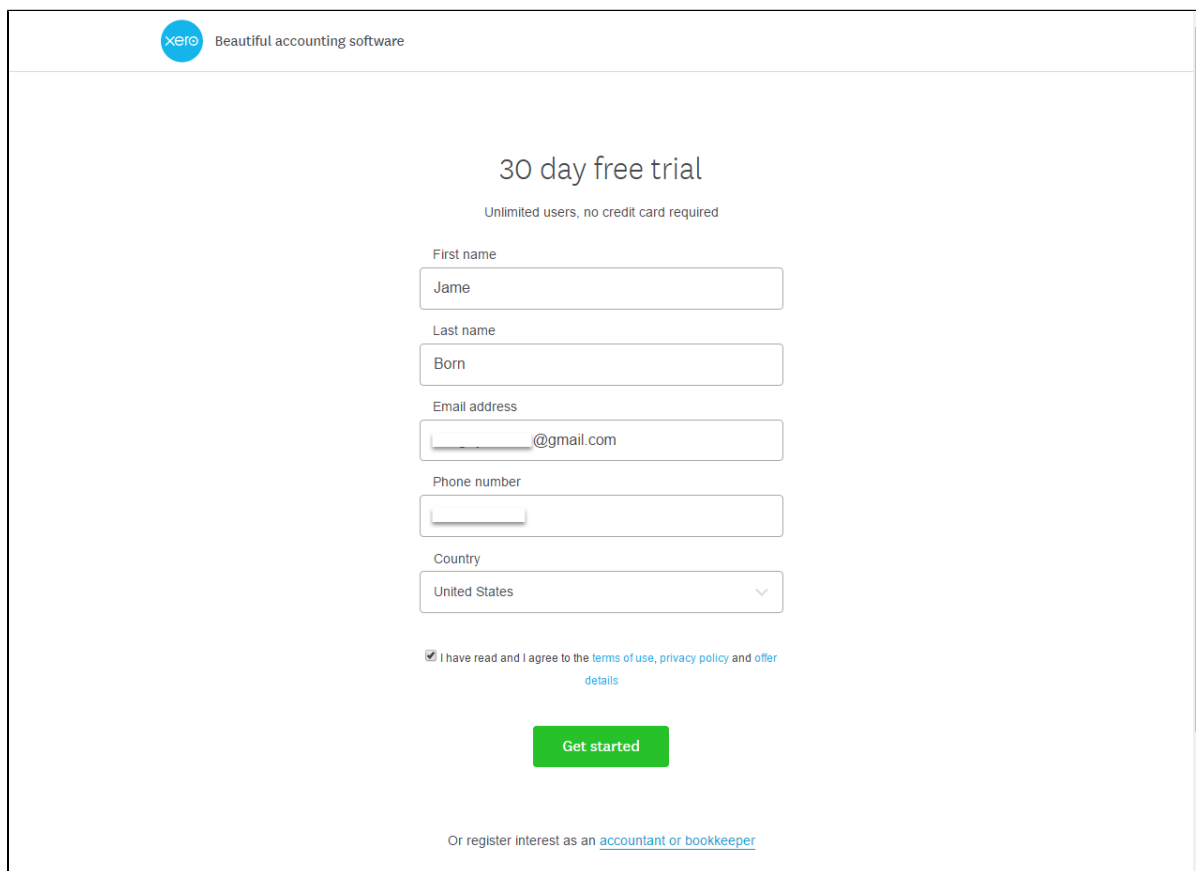

Your store should be running on **Magento 2 Community Edition version 2.3.x and 2.4.x**

How to create a new consumer key

Video Tutorial

First, you need to create a Xero consumer key to connect from Magento 2 to Xero if you haven't got one. Go to <https://www.xero.com/> and register a Xero accounts (click on "Try Xero for free" or "Free Trial").

Fill in the required information click on "Get started". If everything goes right, Xero sends you an account activation email.

The screenshot shows the Xero website's registration page for a 30-day free trial. At the top, the Xero logo and tagline "Beautiful accounting software" are visible. The main heading is "30 day free trial" with the subtext "Unlimited users, no credit card required". Below this, there are several input fields: "First name" (containing "Jame"), "Last name" (containing "Born"), "Email address" (containing a redacted email followed by "@gmail.com"), "Phone number" (containing a redacted number), and "Country" (a dropdown menu set to "United States"). A checkbox is checked, indicating agreement to the terms of use, privacy policy, and offer details. A prominent green "Get started" button is centered below the form. At the bottom, there is a link to "Or register interest as an accountant or bookkeeper".

Now you can create a new consumer key for Xero account. There are two types of Application Mode you can choose: **Private Application Mode** or **Public Application Mode**

For Private Application Mode

In order to create a new consumer key for private app mode, you need to have the public key first. There are two ways for you to get the public key:

- + You can use the public key file attached to our extension.
- + Or please follow the steps below to create a new one:

Go to <http://developer.xero.com/> > Docs then search with **Create a public/private key pair**

Create a public/private key pair page appears as below. Follow the user guide of Xero to get 2 file: **public key(.cer)** and **private key(.pem)**.

The screenshot shows the Xero Developer documentation page for creating a public/private key pair. The page has a dark header with navigation links: XERO DEVELOPER, Docs (highlighted), SDKs, Previewer, My Apps, Community, Partner, and Media. A left sidebar contains a 'How-to Guides' dropdown and a list of guides, with 'Create a public/private key' selected. The main content area is titled 'Create a public/private key pair' and includes an 'Overview' section explaining the OAuth RSA-SHA1 method and the need for an application certificate. It provides instructions for Windows users (downloading OpenSSL and running commands) and Mac users (using Terminal). A code block shows the OpenSSL commands to generate a private key, a public certificate, and a PKCS12 file. A list of steps explains each command. A note mentions Java libraries and PKCS8 format. The page concludes with a reminder to note the certificate's expiry date.

Create a public/private key pair

Overview

Private and Partner applications must sign messages using the OAuth RSA-SHA1 method.

This requires that you create a public/private key-pair, and upload the public certificate during application registration. We refer to this certificate as an application certificate.

To get started with creating a public/private key-pair we recommend the use of [OpenSSL](#).

Windows users

[Download OpenSSL for Windows](#)

To run the commands below, go to the OpenSSL32 directory on your PC, and change to the /bin directory.

Notes:

- You may need to open the command prompt with admin privileges (Run as administrator)
- If OpenSSL has just been installed, you might need to restart your computer before it can generate certs

Mac users

OpenSSL comes shipped with Mac OS X version 10.6.2 onwards. You can use Terminal to run OpenSSL (search for 'terminal' using the search bar in the top right of your screen on your desktop) to open the terminal window and then run the commands below.

Notes:

- You may need to run each OpenSSL command lines with elevated privileges - add `sudo` before each command lines

Using OpenSSL

The basics command line steps to generate a private and public key using OpenSSL are as follows:

```
openssl genrsa -out privatekey.pem 1024
openssl req -new -x509 -key privatekey.pem -out publickey.cer -days 1825
openssl pkcs12 -export -out public_privatekey.pfx -inkey privatekey.pem -in publickey.cer
```

- Step 1: generates a private key
- Step 2: creates a X509 certificate (.cer file) containing your public key which you upload when registering your private application (or upgrading to a partner application).
- Step 3: Export your x509 certificate and private key to a pfx file. If your chosen wrapper library uses the .pem file to sign requests then this step is not required.

Note: If you are using Java libraries which require extracting the private key in PKCS8 format, please refer [here](#).

Please make a note of the expiry date of your certificate as you will need to upload a replacement in the Xero Developer Center before the expiry date to ensure uninterrupted service.

When you have file **public key.cer**, please go to <https://app.xero.com/Application> to create the Application.

Choose **Private** application mode, application name (the name for the application is not very important), choose your organization (this is where the Magento 2 data will be synced into). You need to copy and paste the content or upload the file **Public key.cer** into **X509 Public Key Certificate** field.

Check the information again then choose "I have read and agree to the Xero Developer Platform". After that click **Save** button.

Watch the API tour
(2 minutes long)

- Try the Accounting API Previewer or the Payroll API Previewer to see the API in action
- Register your own application
- Refer to our Developer Centre for our API Reference and code samples
- Review the developer platform terms and conditions before using Xero developer platform features.

Setup an Application

Are you developing a Public or Private application?

☐ Public - for use with any organisation that authorises you

☒ Private - just for use with my own organisation

Application Name

Test for private app mode

Please select which organisation your application can access:

Magenest

X509 Public Key Certificate

☐ Paste In

☒ Upload X509 certificate file (.cer)

Browse...

publickey.cer

☐ Enable Payroll API for this organisation

☒ I have read and agree to the Xero Developer Platform

Terms & Conditions

SaveCancel

What is the difference between a Public and Private app?

Read our guide on [adding an application](#) on the Xero Developer Centre site.

Why do I need an X509 Public Key Certificate?

When using a private application, all calls to the Xero API must be signed using RSA-SHA1.

An X509 Certificate (containing the public key only) will need to be uploaded to Xero so that we can use this to verify the source of your API calls.

Read our guide on [adding an application](#) on the Xero Developer Centre site to learn more about creating a X509 public key certificate.

See the [Xero Developer Centre](#) for more information on OAuth authentication.

If everything goes right, you will see the following content. Click on the "Show" button to get the **Consumer Key** for **Private App Mode**.

For Public Application Mode

Navigate to <https://app.xero.com/Application> to create the Application for Public Mode. You just need to enter Application Name, Url of your company or product and OAuth callback domain. Then **Save** button to finish.

The screenshot shows the 'Add an Application' page on the Xero Developer Platform. The page has a dark header with navigation links: DEVELOPER, Docs, SDKs, Previewer, My Apps (active), History, Community, Partner, and Media. Below the header, there's a 'My Applications' section with a 'Add an Application' button. A green banner at the top of the main content area says 'Getting started with the Xero Developer Platform' and includes a 'Watch the API tour (2 minutes long)' video player and a list of links: 'Try the Accounting API Previewer or the Payroll API Previewer to see the API in action', 'Register your own application', 'Refer to our Developer Centre for our API Reference and code samples', and 'Review the developer platform terms and conditions before using Xero developer platform features.' Below this, the 'Setup an Application' form is visible. It asks 'Are you developing a Public or Private application?' with 'Public' selected. The form includes fields for 'Application Name' (filled with 'Test for public app mode'), 'URL of your company or product' (filled with 'http://xero.demo.izysync.com'), and 'OAuth callback domain' (filled with 'xero.demo.izysync.com'). There's a link 'Callback domains explained' and a checked checkbox 'I have read and agree to the Xero Developer Platform Terms & Conditions'. At the bottom are 'Save' and 'Cancel' buttons. To the right of the form, there are two informational boxes: 'What is the difference between a Public and Private app?' and 'What is the OAuth callback domain for?'. The 'OAuth Signature Method' section explains that public applications use HMAC-SHA1 and have 30-minute access tokens.

Last, click on **Show** button to take **Consumer Key** and **Consumer Secret** for **Public App Mode**.

At My Applications tab

Taking **Consumer Key** that you have just created above and paste into Magento 2 backend configuration. Press **Save Config** after you've done (refresh the cache if needed). Then, click on **Connect Private App Now** button for private application mode or **Connect Public App Now** button for public application mode.

Note

You need to save config before connecting, this will help you avoid making errors.

Setting My Applications in Configuration of your Magento 2 store will base on their app mode types.

Private App Mode:

If you choose **Private** mode, you will have to enter the content of **Private Key(.pem)** and **Public Key(.cer)** beside **Consumer Key**

The screenshot displays the Magento 2 Configuration interface for Xero integration. The 'Configuration' title is circled in green. The left sidebar shows the 'INTEGRATION' menu item highlighted with a red box. The main content area shows 'Xero Account Informations' with a 'NOT CONNECTED' status. Fields for 'Consumer Key', 'App Mode' (set to Private), 'Public Key(.cer)', and 'Private Key(.pem)' are visible. A 'Connect Private App Now' button is at the bottom.

Public App Mode:

If you choose **Public** mode, it will require both **Consumer Secret** and **Consumer Key**. The expiration for each connection time is 30 minutes. After that, you need to reconnect Magento 2 store to your Xero account.

The screenshot shows the Magento 2 Configuration page. The left sidebar contains navigation links: DASHBOARD, SALES, PRODUCTS, CUSTOMERS, MARKETING, CONTENT, **INTEGRATION** (highlighted with a red box), STORES, SYSTEM, and FIND PARTNERS & EXTENSIONS. The main content area is titled 'Configuration' and includes a 'Store View: Default Config' dropdown and a 'Save Config' button. The 'Xero Account Informations' section is active, showing 'My Applications' with a 'Learn More' link. The 'Xero' application is listed with a 'Connection Status' of 'NOT CONNECTED'. Below this, there are input fields for 'Consumer Key' and 'Consumer Secret', and a dropdown for 'App Mode' set to 'Public'. A warning message states: 'Warning: This version only supports Public & Private App'. A 'Connect Public App Now' button is present, with a note below it: 'Please save configuration before Connect'.

When Magento 2 store is connected with your Xero account successfully, connection status will be transferred from *not connected* to *connected* as below:

The screenshot shows the Magento 2 Configuration page with the 'Xero' application now 'CONNECTED'. The 'Connection Status' is displayed in a green box. The 'Account Information' section is expanded, showing the following details:

Field	Value
UserID	58dae05d-ca2d-4792-ab3e-895dc13ddf83
EmailAddress	support@magenest.com
FirstName	William
LastName	Moseley
UpdatedDateUTC	2017-05-08T02:35:46.673
IsSubscriber	true
OrganisationRole	STANDARD

A 'Disconnect' button is located at the bottom of the account information section.

At Configure the Accounts Types in Xero tab

The system will take four account types in the chart of account: **Bank account, Sale account, Inventory account, Cost and Good Sold account** from Xero account into Magento 2 store. Enter the name you would like to use for each account then click on **Add all Data to Queue**. The default Xero account name will be used if you do not change it. If there is no account on Xero site, the extension will automatically create a new one.

Set up Synchronization

Admins are able to choose which type of data to sync from Magento 2 to Xero: **Customers, Products(Items in Xero), Orders, Invoices, Credit Memos**. In addition, admins can choose the way to synchronize data Immediately use Cron Job. Admins can also **Add All data To Queue** or add **individual data group** queue for synchronizing.

How to distinguish between Immediately mode and Cron Job mode.

- **Immediately mode:** the data will be synced to Xero as soon as they're created or updated in Magento
- **Cron Job:** the data will be put into a queue and will be synced together after some intervals
- Some application mode like private mode only allows 1000 requests a day. Choosing Cron Job will guarantee all data will be synced. We recommend you use Cron Job mode to make sure that you don't run out of requests per day.

At the end of Configuration, admins can quickly navigate to the online documentation as well as support portal for Xero Integration extension:

When the process is completed, go to **Xero Integration > View Log** to check what has been synced.

- If the data has been synced successfully, the Status will be **success** and the Message will be "OK"
- If there's a problem during the syncing process, the Status will be **error** and the Message tab will show the error message

Admin can easily check the synchronization log for the day by clicking on View Request Daily or view individual sync log by clicking on View on Xero

- Products

* Note: The products name must be less than or equal to 50 characters otherwise it would be cut off to fit in since Xero only allows maximum 50 characters in product name.

In addition, the products SKU must be less than or equal to 30 characters otherwise it can't be synced to Xero since Xero only allows maximum 30 characters in product SKU.

Update

- When a new update is available, we will provide you with a new package containing our updated extension.
- You will have to delete the module directory and repeat the installing steps above.
- Flush the config cache. Your store and newly installed module should be working as expected.

Support

- We will reply to support requests within **2 business days**.
- We will offer **lifetime free update and 6 months free support for all of our paid products**. Support includes answering questions related to our products, bug/error fixing to make sure our products fit well in your site exactly like our demo.
- Support **DOES NOT** include other series such as customizing our products, installation and uninstallation service.

Once again, thank you for purchasing our extension. If you have any questions, please do not hesitate to contact us for support.
