Introduction

Barclays is a British multinational banking and financial services company headquartered in London. It is a universal bank with operations in retail, wholesale and investment banking, as well as wealth management, mortgage lending and credit cards. It has operations in over 50 countries and territories and has around 48 million customers.

Therefore, **Magenest** has created **Barclaycard ePDQ Payment Gateway** to be able to interact between Barclay bank and customers in the most convenient way.

Features For Admins

- A lot of features is included in the extension that you can tweak to make it best suit your business, including:
 - Choose between Authorize Only or Authorize and Capture.
 - View order status
 - Check email customer
 - Allowed credit card types
 - Enable 3D Secure
 - Enable CVC verification
 - Restrict unwanted countries from making payment
 - Order total threshold
 - Submit invoice from backend

Features For Customers

- The primary aim of the extension is to deliver the most fluent and effortless payment experience to the customers:
 - Easily checkout using credit card.
 - Purchase through telephones or emails

System Requirements

Your store should be running on Magento 2 Community Edition version **2.1.x., 2.2.x**

Configuration

Set up Barclays Account

You need to have a barclays account to use our extension. If you don't have any Barclays accounts, you can **Create a new account** by clicking on the following link: <https://www.barclaycard.co.uk/> and choose **Register**

In case you already have a Barclays account, skip this step and sign in.

Register for instant access to mybarclaycard online servicing

Get secure access to manage your Barclaycard account your way 24/7. Registering is quick, easy and completely free.

You'll need to provide all the information requested below:

1. Help us identify you

You can use any Barclaycard account if you have more than one.

Date of birth / /

Card number

Card security code

Expiry date /

Current credit limit £

2. Set up your online login details

To stay secure, please choose details that are easy to remember but difficult to guess.

Username

Passcode

Confirm passcode

Memorable word

Confirm memorable word

Memorable word reminder

3. Enter an email address for your account alerts

Once registered, you'll automatically be switched to online statements, which you'll be notified of by email every month. But you can choose to receive paper statements instead by going to 'Your Settings'.

Email address

☒ We promise not to inundate you with emails - but tick if you'd prefer not to hear about Barclays Group news, products or services (even if you've told us before).

4. Please read and agree our Terms & Conditions

☒ I've read and agree to the Barclaycard online [Terms & Conditions](#).

Register

If you have a Barclays account, **sign in** to your account.

Set Configuration

+ General Settings:

Go to **Stores > Configuration > Sales > Payment Methods**

PSPID: the username you use to login to the ePDQ Merchant services pages

Hash algorithm: Magento Edition hashes all data that does not require decryption by using a strong SHA-256 hashing algorithm instead of the previously used MD5.

passwords will be hashed using the new algorithm whenever they are entered by customers, and all new passwords will be hashed using the SHA-256 or SHA-512 algorithm.

- **Notification URL and Notification error URL**

In Barclaycard, go to **Configuration -> Technical Information -> Transaction feedback -> Go to "Direct HTTP server-to-server request"** and fill the Notification and Notification Error URLs from Magento backend in.

And click in check box "Online"

Both Notification URL and Notification error URL are HTTPs protocol.

If using HTTP, you will not receive response from Barclay, then orders cannot handle the payment result.

You should choose some variables in "Dynamic e-Commerce parameters", but should not choose all of them.

You can overwrite the default redirection URLs configured above by sending along redirection URLs in the transaction details.

☒ I would like to receive transaction feedback parameters on the redirection URLs.

☒ I would like Barclaycard to display a short text to the customer on the secure payment page if a redirection to my website is detected immediately after the payment process.

Direct HTTP server-to-server request

Timing of the request

☐ No request.

☒ Online

URL of the merchant's post-payment page

If the payment's status is "accepted", "on hold" or "uncertain".

Notification URL

If the payment's status is "cancelled by the client" or "too many rejections by the acquirer".

Notification Error URL

Request method

☒ POST

☐ GET

Dynamic e-Commerce parameters

This exchange box allows you to select or deselect the parameters you wish to receive as feedback for a transaction and move them from one box to another. Please note that NCERROR, PAYID, ORDERID, STATUS are default parameters.
